

A FREE GUIDE

How to Actually Ship a Digital Product

A Free Resource from The Lazy Creator Co.

THE LAZY CREATOR CO.

Welcome

Hi, I'm Michael — the person behind The Lazy Creator Co. I've shipped digital products across a lot of different niches now — content packs, courses, bundles, an activity library. The specific products change every time. The five things that actually get something shipped don't.

If you want to see what shipped, done-for-you digital products actually look like, browse the Content Packs in the Marketplace — built exactly the way this guide describes.

SECTION 1

The Real Bottleneck Isn't the Idea

Almost everyone has more product ideas than they'll ever build. The bottleneck was never the idea — it's finishing. Across every niche I've built content packs for, the products that made money weren't the cleverest ones. They were the ones that actually got shipped.

If you're stuck between three ideas, that's not a sign you need a better idea. It's a sign you're avoiding the harder part, which is finishing one of them.

Key Takeaway

Pick the idea that's easiest to finish this week, not the one that sounds the most impressive.

SECTION 2

Pick One Lane First

Trying to serve everyone means your first product speaks clearly to no one. Every product line I've built started in exactly one niche, with one specific person in mind — not 'creators' broadly, but one type of creator with one specific problem.

Once that first niche actually sells, expanding into a second one is easy — you already know what works. Starting broad and narrowing later almost never works in the other direction.

SECTION 3

Build the Smallest Real Version

A single well-made PDF that solves one problem will teach you more about whether something sells than a half-finished course ever will. Every course and bundle I've built started as a smaller product first — the smallest version that's still genuinely useful on its own, not a stripped-down teaser.

The smallest real version isn't the cheap version. It's the version with nothing left to cut.

Key Takeaway

Ship the smallest thing that actually solves the problem completely. Everything bigger can come after it proves itself.

SECTION 4

Price It Simply

One price, one product, no tiers to explain and no subscription to manage. Every product I sell is a flat one-time purchase. It's easier to build, easier to explain, and easier for someone to say yes to on the spot instead of thinking it over.

Complicated pricing is usually a sign the product itself isn't clear yet. Fix the product before you fix the pricing page.

SECTION 5

Ship Before It Feels Ready

It will never feel completely ready. That feeling doesn't go away at some magic finish line — it goes away after real people actually use the thing and tell you what's actually wrong with it, which is always different from what you assumed was wrong with it.

Ship the version that's genuinely useful, then improve it with what you learn from people who actually paid for it.

See It In Practice

Every principle in this guide is just a description of how the products in the Marketplace actually got made — niche-first, smallest real version, flat pricing, shipped before it felt finished.

The Marketplace

Content packs, courses, and bundles for 10 niches — done-for-you, buy once.

The Activity Vault

A full case study on how one product line actually got built — also free.
